Free time activities

In my free time I like solving some challenging programming task provided by an interesting platform called *Entwicklerheld*. It has the feature of giving a reward on successfully solving the chosen task. Depending on the hardness of the problem, the reward may have different values. In general the reward is just points between 150 and 1000 points and the user may afterwards exchange the reward into a *voucher*. At a certain time, I got addicted to the website and it was really fun buying stuff by just thinking and programming.

My second interesting hobby after programming is reading books about neuroscience, the secrets behind the human brain and quantum physics. My recent books are:
- Künstliche Intelligenz und der Sinn des Lebens –Richard David Precht

- Wer bin ich und wenn ja, wie viele? –Richard David Precht

- Something deeply hidden, quantum worlds and the emergence of spacetime –Sean Carroll

- Die Physik des Bewusstseins über die zukunft des Geistes –Michio Kaku
